Spinning logo when entering the home page:

Welcome to my personal portfolio website.

This website introduces my background, experience and growing web development skills.

Cards with hover effect:

Print preview:

Colour palette:

The website was intentionally designed with a simple and consistent layout to keep the focus on readability, navigation and usability rather than overly complex visual elements. I wanted the portfolio section of the website to feel professional and clean, while still demonstrating core HTML and CSS skills such as responsive layouts, navigation menus, hover effects and print styling.

I also made the decision to keep the colour palette relatively neutral at this stage because the next assessment will introduce an additional four pages focused on a company website. This will provide a better opportunity to introduce stronger branding, more colour variation and additional design features to help visually differentiate the portfolio section from the company-focused section of the project.

The current design reflects a balance between professionalism, consistency and functionality, while still leaving room for future expansion and visual development in the next stage of the project.

Web Skills:

Testing Plan

Test	Testing Method	Expected result	Pass/Fail
Navigation links	Clicked each navigation button on every page.	All pages open correctly	Pass
Images display	Opened each page and checked the logo, profile image, family image and favicon.	Images load correctly	Pass
CSS styling	Checked each page in the browser to confirm fonts, colours, spacing, cards and layout were consistent.	Styles consistent across pages	Pass
Print preview	Used Ctrl + P on each page and checked the print preview.	Navigation hidden when printing	Pass
Responsive layout	Resized the browser window and checked the layout on a smaller screen width.	Layout stacks on smaller screens	Pass
Validation	Uploaded each HTML file and the CSS file to the W3C validators.	HTML/CSS validate successfully	Pass

Main Improvements from Assessment 2

1. Removed all inline and internal CSS and moved styling into a single external stylesheet.
2. Updated CSS button navigation with hover effects.
3. Added a print-friendly stylesheet.
4. Added a logo and favicon.
5. Improved consistency across pages through reusable CSS classes.
6. Added animation.
7. Improved folder structure and relative file path management using ../.
8. Added a structured HTML table to the resume page.
9. Refined spacing, colours and typography to improve readability.

Personal reflection

Throughout Assessment 3, I found that although the overall structure of the website remained similar to Assessment 2, the smaller technical improvements required significantly more attention to detail. A large part of this assessment focused on refining and improving the website rather than simply building pages, which made the process more challenging in different ways.

One of the most difficult parts of the assessment was implementing the print-friendly CSS. While the concept initially seemed straightforward, it took a considerable amount of testing and adjustment to ensure elements displayed correctly when printed. I needed to hide the navigation bar and background images, resize text appropriately and make sure spacing and layouts still looked clean in print preview. Small changes in the CSS would often affect multiple pages, so I had to repeatedly test the website using Ctrl + P and refine the styling until it worked consistently.

I also spent a lot more time improving the consistency of the website across all pages. This included refining spacing, aligning content sections, improving the navigation buttons, adding hover effects and ensuring the overall design looked professional and cohesive. Managing the external CSS file became easier compared to the previous assessment, however I still found myself occasionally creating redundant styles when experimenting with different layouts and effects.

Another area that improved my understanding was reorganising the folder structure and using relative file paths correctly. Once the HTML pages were moved into their own folder, I needed to update all image, CSS and favicon paths using "../". Although this was a small technical change, it helped me better understand how webpages connect to external resources.

Overall, this assessment helped me realise that web development is often less about large visible changes and more about refining the smaller details that improve usability, consistency and presentation. It also reinforced the importance of testing, validation and maintaining organised code as projects become more complex.

Validation
